Existing Elevation

The existing porch structure is to be repaired and retained in place.

The central doors will be replaced with new glazed entrance doors, providing more light and a more welcoming entrance to the Church.

The heavy timber work over the proposed doors will be removed and replaced with a glazed over-light providing more light into the new foyer space within.

The application of glass will increase viability between the internal and external environments as well as increasing legibility of the church's principal entrance.
